CYBERSECURITY CHECKLIST: Use these tips to safeguard your system

Keep your hardware modern and software up to date

Use complex passwords or passphrases and enable multi-factor authentication wherever possible.

Regularly review who has access to your applications, especially the IT admin functions

Train every user on how to recognize phishing attempts and scams

Use the leading anti-virus and anti-malware software – and keep it updated

Maintain an actively managed "next-generation" firewall

Back up your critical systems and information

Develop a Wi-Fi usage and policy

Set up Data Encryption

Establish a Remote Access policy

Invest in Cyber Security Insurance

Following these tips will help keep your data protected against cybercrimes. For more information, please contact us at IT21st: 855.488.2178
